Pembroke Power Station team raises over £10,000 for Royal National Lifeboat Institution through a year of fundraising

Pembroke, 24 April 2026

RWE's Pembroke Power Station has raised £10,105.40 for the Royal National Lifeboat Institution (RNLI) over the past year, following a series of fundraising activities organised by employees in support of the station's 2025 charity of the year.

Each year, Pembroke Power Station staff nominate a local charity to support. Over the past year, employees selected the RNLI, reflecting the station's strong connection to the surrounding coastline and maritime community.

Located on the Pembrokeshire coastline, Pembroke Power Station is one of the largest and most efficient gas-fired power stations in the UK. The combined cycle gas turbine (CCGT) plant plays a key role in supporting the UK's electricity system, providing flexible and reliable power to complement renewable generation. With strong ties to the local community and coastline, the station's workforce shares a close connection to the waters where RNLI crews carry out their lifesaving work.

Throughout the year, employees organised and supported a range of initiatives, including cake sales, raffles, team quizzes, and the station's first Charity Golf Day. These activities brought colleagues together while raising vital funds to support the RNLI's mission to save lives at sea.

Roland Long, Pembroke Power Station Manager, said: "The team has truly gone above and beyond for our 2025 station charity, the RNLI. Pembroke Power Station sits proudly on a peninsula of the Haven, and every one of us feels a deep connection to the beaches and waterways where the RNLI saves lives year after year. From organising golf days, raffles, and competitions, to coming up with new and creative ways to raise funds, the team never stops finding ways to support great causes. The amount raised this year has been exceptional, and I want to thank everyone for their energy, generosity and commitment."

RWE

Alice Coleman, RNLI Community Manager in Pembrokeshire, added: “We are incredibly grateful to the team at Pembroke Power Station for choosing the RNLI as their charity of the year and raising such an impressive amount. We know how much time and effort go into organising and supporting fundraising events like these. Every pound raised helps us continue our lifesaving service, ensuring that local communities and visitors to Pembrokeshire can enjoy the coastline knowing our volunteer crews are ready to respond 24/7, 365 days a year.”

The fundraising programme concluded with a visit to Tenby Lifeboat Station, where representatives from Pembroke Power Station presented the cheque to RNLI volunteers. The visit offered an opportunity to see first-hand how the funds raised will support the charity’s operations and volunteers.

The initiative reflects Pembroke Power Station’s ongoing commitment to supporting local communities and charities, alongside its role in delivering secure, flexible and increasingly low-carbon energy for the UK.

About Pembroke Power Station

RWE’s Pembroke Power Station is a combined cycle gas turbine (CCGT) power plant located in Pembrokeshire, Wales. Commissioned in 2012, the station has a generating capacity of approximately 2,200 MW, making it one of the largest gas-fired power stations in the UK. It is capable of supplying electricity to millions of homes and plays a vital role in maintaining grid stability by providing flexible generation to support renewable energy sources such as wind and solar. The station is operated by RWE and is a key part of the Pembroke Net Zero Centre (PNZC), supporting the development of decarbonisation technologies, including carbon capture and hydrogen. This year also follows a significant operational milestone for the station, which recently celebrated achieving 10,000 combined cycle gas turbine (CCGT) starts, highlighting its critical role in providing flexible generation to balance the grid and support increasing levels of renewable energy.

RWE

RWE is leading the way to a modern energy world. With its investment and growth strategy, RWE is contributing significantly to the success of the energy transition and the decarbonisation of the energy system. Around 20,000 employees work for the company in over 20 countries worldwide. RWE is one of the leading companies in the field of renewable energy. RWE is investing billions of euros in expanding its generation portfolio, in particular in offshore and onshore wind, solar energy and batteries. It is perfectly complemented by its global energy trading business. Thanks to its integrated portfolio of renewables, battery storage and flexible generation, as well as its broad project pipeline of possible new builds, RWE is well positioned to address the growing global

demand for electricity, particularly driven by further electrification and artificial intelligence. RWE is decarbonising its business in line with the 1.5-degree reduction pathway and will phase out coal by 2030. RWE will be net zero by 2040. Fully in line with the company's purpose - Our energy for a sustainable life.
