

This is why I love
my job...

Molly Gifford
Offshore Wind Turbine Technician

Teamwork

"Offshore, you're completely reliant on your team, and communication and coordination are key. We work closely together every day, supporting one another to get the job done."

Support

"Offshore wind is still very male-dominated, but I've never felt excluded or faced challenges because I'm a woman. In fact, in my experience, people go out of their way to make sure I feel comfortable, included, and supported."

Inclusive

"RWE has been proactive in making the industry more inclusive. The apprenticeship intake has consistently maintained a 50/50 gender split, and I've felt supported at every stage."

Pathway

"If you're interested in engineering, consider starting with an engineering college - I didn't even know that was an option when I was younger. And if you like an active, hands-on job, offshore wind is a great industry to get into."
